README

This readme will explain the search function and slideshow more in-depth. All other functions stated in the project are implemented and will be straight forward to find/ apply.

Opening the app, a stock album is preloaded with two stock photos. Search Function can be found using the tool bar on the main page. Hitting the '3 dots' will open a menu with the option of 'Searching in albums'. Hit this and it will redirect you to the searching page. In this page, we can search tags by Person only, Location only, both Person and Location match, or either person or location match

Main Page-> Open Album-> Display Photo button will show the selected image, with the caption at the top. Loads tags if there are and allows you to add tag, delete tag, and move photo. Display photo page also has buttons on the top that say PREV and NEXT, this will bring you to the next or previous photo in the album (like a slideshow). We did not do a direct slideshow button, but allowing this will be sufficient as a slideshow.
